

Bruno Arruda Magalhães

Fullstack Developer Pleno | Node.js | React | Next.js | NestJS | AWS | PostgreSQL

Goiânia, GO | (62) 99828-1602 | bruno.arrm@gmail.com | [linkedin](#) | [github](#) | [portfolio](#)

PROFESSIONAL SUMMARY

Fullstack Developer specializing in building financial systems and high-criticality microservices. Solid experience in integrating with ERP systems, asynchronous automation with AWS SQS FIFO, and multi-tenant architectures. Proficient in the modern TypeScript ecosystem—with NestJS on the backend and Next.js on the frontend—implementing complex forms (React Hook Form + Zod, server actions, SSR - Server Side Rendering), optimized API consumption via TanStack Query, and reusable component libraries.

PROFESSIONAL EXPERIENCE

Feb/2025 – Present Fullstack Developer – Anbetec Tecnologia

- Designed and developed an AI-based financial assistant using Hexagonal Architecture (NestJS), integrating LLMs (Claude) for automatic categorization of revenues/expenses via CRONs and an interactive chatbot powered by AI Agent Tools / Function Calling on the backend.
- Designed and end-to-end developed the automated collections engine (NestJS, Next.js, AWS SQS FIFO, and Redis Lock), processing notification schedules and multi-channel delivery (AWS SES and WhatsApp).
- Architected the Multi-Tenant solution based on PostgreSQL Schemas for the MyBanks/MyCards platform, applying AsyncLocalStorage (ALS) in Node.js and TypeORM to ensure strict data isolation per company via dynamic search_path.
- Built the Card Reconciliation engine (MyCards), developing high-performance SQL pipelines in PostgreSQL with optimized CTEs to audit and reconcile millions of acquirer transfers against titles from Winthor, Protheus, and Consinco ERPs in real time.
- Developed financial management dashboards and public collections routes, with a verification layer, in Next.js, TanStack Query (SSR Hydration), MUI X DataGrid Premium, and Server Actions, integrating access validations via JWT tokens and real-time action tracking.
- Led the standardization of the company's frontend forms and components, creating a centralized library based on Zod, React Hook Form, and Zustand, increasing team productivity and ensuring visual consistency.

Jun/2024 – Feb/2025 Frontend Developer – Manto Sistemas

- Developed complex and high-performance interfaces for large-scale web applications using React, Vite, TypeScript, and Tailwind CSS.
- Built reusable components aligned with the internal Design System, implementing advanced logic for global state management and form validation as requested by the UX/UI team.
- Collaborated on the integration of RESTful APIs and consumption of backend endpoints, optimizing data flow and client-side loading time.

Jul/2023 – Jun/2024 Frontend Developer – SIC (Goiás Government)

- Worked on the continuous development and maintenance of the official portal for the Secretariat of Industry and Commerce.

ACADEMIC BACKGROUND

Technologist in Systems Analysis and Development – Universidade Paulista (UNIP) | Completed in 2023

KEY TECHNOLOGIES

Backend & Arch: Node.js, TypeScript, NestJS, TypeORM, Clean Architecture, SOLID, REST APIs, Microservices

Frontend: Next.js (App Router, Server Actions), React.js, Vite, Material UI (MUI), Tailwind CSS, Styled Components, React Hook Form, Zod, Zustand, TanStack Query

Cloud & DevOps: AWS (SQS FIFO, SES, S3, Cognito), Docker, Redis (Distributed Lock), CI/CD, Git

Data & AI: PostgreSQL (Multi-schema, CTEs & Query Tuning), Oracle (Winthor)

Quality & Management: Git Flow, PR Review, OpenAPI/Swagger, Scrum, Kanban
